CATARRH

ING CURED,
With Dropping in Throat almost to Choking
Headach, Pains in Shoulders, Back
Kidneys, and Entire Breaking Down of
System, by

The CONSTITUTIONAL CATARRH REMEDY first article placed before the public that proposed to build up the building up the Constitution. It struck at the root of the difficulty, and thousands upon thousands of letters have been received by the proprietors, setting forth the cures and what is remarkable, curing the only the catarrh and other ailments at the same time. This is what it does. The following statement is only a sample of what we constantly receive, from well known people. "I can now write, and not to be head ones, catarrh and its attendant evils, and I have no cough, incipient consumption."

to my appetite and general weakness, all the
together when the constitutional Catarrh
is taken as recommended.

MESSRS. LITTLEFIELD & CO.,
I reside at Manchester, N. H., and previously
resided at Henniker, and am a native of New
Hampshire. I have had Catarrh twenty five years
ever since I was twenty years old; had it
all the time. It runs all the period, and night
would fill up and drop down in my throat, and
a feeling of choking, so that I would stop
in bed to save myself from strangulation
affected my head, so that I felt confused, and
troubled with severe headache.

back and kidneys, from which I suffered
myself. So bad were they, that a year ago
summer I was obliged to be in bed most of
time for three months. I have tried all kinds
snuffs and Catarrh remedies with no particu-
benefit, and consulted physicians. I began to
the Constitutional Catarrh Remedy last Aug.
I began to grow better before finishing the
bottle. I am now on the third bottle. My Cat-
is cured; my back and

new. I think it is this medicine that has made me from intense suffering and almost the greatest exposure, and feel that I cannot too much in favor of the Constitutional Remedy.

Manchester, N. H., Feb. 1871.

Price \$1 per bottle. A pamphlet of 32

School Notice.

THOMAS MAHAN'S.

Poetry.

April Fetting.
I heard two robins singing in the wood;
One April day,
And what they said my heart well understood;
That April day,
"Oh, love is sweet through all the busy day,
Oh, love is sweet in winter and in May."
But then, you know, the hour was folly,
That April day.
And I, to keep in time the merry birds,
That April day,
Sung with them thoughtlessly some foolish words,
That April day.
"My love is fair, I could not help but choose
him,"
My love is wise, oh! what could I refuse him.
That April day.
"Yet should he hear me sing, let him beware—
That April day,
And if I say 'I love him,' have no care—
That April day.
The token that he gave me, yes, I kiss it;
And if he sends it, I will surely miss it;
But promise, oh! kiss, now pray what it is.
That April day.
Singing and laughing through the woods I came,
That April day.
Until a clear, strong voice, sank back again;
That April day.
This girl of smiles and tears, this little rover,
With pleasant voice, does heart discover,
Thy truth is wisdom, I, thy happy lover,
Thou April-May."
He closed his hand and through the woods
He went,
That April day.
Singing like robins in our glad content,
That April day.
Oh, golden sunshine, oh, silver rain;
Oh, sweetest joy, and oh, sweetest pain;
Two happy hearts, sweet watching daylight
Waning,
That April day.

Farm and Household.

Diet of Farmers.
We are glad to hear testimony to the great improvement manifest during the last quarter of a century in the diet, not only of farmers, but of the community generally. There is much less pork consumed than formerly, vegetables and fruits are more abundant, the bread is in greater variety and of better quality, pies are less frequently seen on the breakfast and supper tables, fried doughnuts do not constitute such a staple article of consumption, and the grilliron and roasting-pan are substituted in a good degree for the physicians call the "infernal frying-pan." While conceding this much, we must say there is margin for further improvement, and we can see no injustice done to the farmers in Dr. Adam's summing up of the testimony of the leading physicians of Massachusetts, with this advice to them: "More fresh and less salt meat; less frying, more boiling, broiling and baking; a greater variety of vegetables and fruit; less pies and cakes; more whole-some, well-kneaded bread, raised with yeast; less tea." If farmers reject this cheap and wholesome advice, dyspepsia will continue to be one of the diseases to which they are particularly liable, and they may have to spend their substance for physic which otherwise might have been cast to the dogs.

Rheumatism is, doubtless, the disease to which farmers are liable, and exercise and untimely work, coupled with unnecessary exposure, the cause of it. Out-door work gives a man the stomach of an ostrich, so far as digestion is concerned, and enables him to eat with impunity what would kill a man of sedentary habits. But there is no advantage in taxing the digestive organs of out-door workers beyond what is necessary. At this season of the year, particularly, pork should be eschewed. It furnishes heat rather than muscle, and in laying and harvesting muscle is of more value than heat for the laborer.

During the hot season milk, bread and cheese, lean mutton or beef in moderate quantity, vegetables and fruits should constitute the chief articles of diet. The English farm-laborer makes a great use of bread and cheese. These constitute his luncheon in the field, and are recommended both by instinct and science. Casein or cheese is muscle-forming in its elements, and it were well if our laborers were more addicted to its use. Cheese is too hearty to eat alone, and bread is its natural supplement and concomitant. There is more muscular strength furnished by a pound of cheese than by two pounds of meat, and the cost of the cheese per pound is generally much less—*New York Times.*

How to Make a Hot Bed.
Place the frame where the bed is to stand, fronting to the south or south-west; mark the ground all around on the inside of the frame, then remove the frame and dig out a space about eighteen inches deep, and replace the frame, which will rest immediately on the edge of the pit. Then procure some stable manure, which ought to be fresh from the stable, and place it near in a heap. Shake every fork full, mix the long manure with the short, now begin to fill the pit; when you have taken in dung to the thickness of five or six inches, beat well down, and so on, till the manure is about nine inches from the top of the front of the box; now see that it is quite level and put on the sash. The heat will begin to rise next day, and on the second day it will be ready to receive the earth, which should be dry, not like dust, but not too wet, and should be rich and fresh. The bed should be filled up about six inches with it; then put on the sash and let them remain twenty-four hours; then take them off and stir the earth well. The earth is to be level, not sloping like the glass. The glass is sloping to meet the sun's rays and to carry off the water. The earth which was taken out of the pit should be put around the outside of the frame so that no water will run into the bed. When ready to sow the seed take off the sash and make little drills from the back of the bed to the front, drop the seed along the drills regularly, cover all over smoothly, write the names of the seeds and date of sowing on a small piece of paper put in the cleft of a little stick, and stick it into the ground at the end of each drill, and put on the sash. The main principle is to give always as much air as the plants will endure, taking advantage of every mild day to remove the sash for this purpose. If they have not enough air they will grow up spindling, and will have small seed leaves and, indeed, if too much deprived of air, will die. Let them grow upward rather than tall; short stems and broad, dark green seed leaves are signs of good plants. Out of a hundred failures in hot-bed culture, ninety-nine arise from giving too little air. When it is necessary to water, do it with a watering-pot that does not pour heavily. Water at sunset and shut down the sash tight. Should high winds or a sharp frost set in, protect your beds with straw or straw mats.—*Practical Farmer.*

Food for the Sick.

To an invalid, mealtime is the great event of the day, and he is surely to be pitied who has not a kind mother or sister, or a dexterous-handed wife, to prepare for him some of those simple, wholesome, and yet dainty dishes which are so gratefully received if served, in an attractive manner. There are many women who can prepare palatable dishes for those in health, but practically know nothing about the needs of the sick. It is mainly for the benefit of these that the following suggestions are made.

In the first place do not ask a sick person what he will have to eat. The very effort of coming to a decision will often destroy his appetite. Next, remember to have the food served on the best and finest ware in the house. Many a good cup of tea has been spoiled for a patient by being handed to him in a common or cracked cup. Never allow a bit of food to remain in the sick-room after the meal is finished; it is another source of weakness of the appetite of a delicate sufferer. If toast is offered, see to it that it is evenly browned on both sides, has the crust cut off, and that it is crisp and fresh from the fire. A thick piece of toast, unevenly browned on the outside and doughy in the center, is extremely indigestible.

Always remember that in cooking rice, oatmeal, wheat, or any of the other grains, salt boiling water should be used. By this means the kernels remain whole, and the flavor is much improved. Pork in all its forms, as well as veal and all fatty substances, are especially to be avoided in the diet of an invalid. The best modes of cooking beef are by roasting and broiling. Potatoes that are baked or roasted are much easier of digestion than those that are boiled. Graham bread, corn bread, and rice biscuit are all more nourishing than bread made from bolted wheat flour.

A very nourishing and acceptable dish for invalids is a fresh egg which has been broken into boiling water and cooked until the albumen has just "set" while the yolk remains raw. This should be served on a piece of toast and garnished with parsley.

Feeding for Butter.

A reader of the *Tribune* wants to know "which is the best and cheapest feed for a butter dairy—wheat bran at \$1.25 per cwt., buckwheat bran at \$1.50 per cwt., or oats at fifty cents a bushel, in either case to mix with corn." Either kind of feed will make an excellent accompaniment of corn meal, and the difference between their respective values, by weight, is not very great. Oat meal will be the best, but the dearest, relative values considered. The nutritive value of the two kinds of bran is very nearly in accordance with their respective prices. A good many farmers place a higher value upon buckwheat bran than the above remark accords to it, but it has not proved, either in my experience or observation, to be equal to wheat bran—Buckwheat bran varies greatly in quality. That which is made up chiefly of the capsules or shells of the grain is of little value. The shells are about like chips in porridge. They are only to fill up space, and are, moreover, a very harsh substance for the alimentary canal, often scratching it, so much as to produce irritation. In their natural condition they are indigestible and useless, and pass the animal in the same condition in which they were taken. It should they are readily dissolved and digested. When the hulls are sifted out, buckwheat bran is considered more valuable than the bran of wheat, but owing to difference in grinding, it has not the uniform value of wheat bran.—*Prof. L. B. Arnold, in N. Y. Tribune.*

A Cure for Wounds.—As soon as a wound is inflicted get a little stick—a knife or file-handle will do—and commence to tap gently on the wound. Do not stop for the hurt but continue until it bleeds freely and becomes perfectly numb. When this point is reached you are safe,—all that is necessary is to protect it from dirt. Do not stop short of the bleeding and numbness and do not on any account close the opening with plaster. Nothing more than a little simple ointment on a clean cloth is necessary. We have used and seen this used on all kinds of simple punctures for thirty years and never knew a single instance of a wound becoming inflamed or sore after treatment as above. Among other cases: A coal-rake-tooth going entirely through the foot—a rusty darning needle through the foot—a bad bite by a snapping pig—several instances of file shanks through the hands—and numberless cases of rusty nails, awls, etc., but we never knew a failure of this treatment. *Scientific American.*

Preserving Eggs.—A writer in the *English Mechanic* says: "In the year 1872, I preserved eggs so perfectly that, after a lapse of six months, they were mistaken when brought to table for fresh laid eggs, and I believe they would have kept equally good for twelve months. My mode of preservation was to varnish the eggs as soon after they were laid as possible with a thin copal varnish, taking care that the whole of the shell was covered with the varnish. I subsequently found that by painting the eggs with fresh albumen, beaten up with a little salt, they were preserved equally well and for as long a period. After varnishing or painting with albumen, I lay the eggs upon rough blotting-paper as I found that, when allowed to rest till dry upon a plate or on the table, the albumen stuck so fast to the shell that it was a chip out of the shell.—This is entirely obviated by the use of the blotting-paper. I pack the eggs in boxes of dry bran."

LOOK OUT FOR CANKER WORMS.—This is the time to be looking after your trees and guarding them from the ravages of the canker worms a few weeks later. After this rain, the grubs will be likely to ascend the trees and lay their eggs. It is said that these pests can be circumvented by binding strip paper about the trunk of the trees, near the ground, and keeping a circle of printing ink or tar drawn around the paper. Mr. W. G. C. Kimball of Concord, put coal ashes about the foot of an apple tree to the depth of six inches, and saturated them with kerosene oil; the result was that he found a pint of dead grubs under the tree in the morning and no live ones on the tree.

MAIL.

All Persons at a distance treated by Mail with Perfect Success by describing their Symptoms.

Dr. A. J. Flagg's COUGH AND LUNG Syrup.

A Safe and Sure Remedy.

The Cough and Lung Syrup

It is the remedy that during the past five years has won for Dr. A. J. Flagg the reputation as a SPECIALIST for THROAT and LUNG diseases. After so many years trial it can be truthfully said that it has NEVER FAILED, even in the worst cases. It is purely Vegetable, and the food upon the system is as once Souding and Tonic.

It Will Cure a Common Cold

In a few hours, not by drying it up, but by removing it from the system.

It Will Cure a Chronic Cough, by soothing the irritated parts, and strengthening the system.

It Will Cure CONSUMPTION

Even after all other remedies have failed. In the early stages of the disease it will arrest a speedy and certain cure, and in many cases of advanced consumption the effect has seemed almost miraculous, restoring full strength and perfect health, when physicians had given up as incurable.

IT WILL CURE CATARRH

More effectively than any other remedy, by simply removing the cause. TRY IT.

It Will Cure BRONCHITIS, by acting on all irritation of the Throat. TRY IT.

It Will Cure Ulcerated Sore Throat. TRY IT.

IT WILL CURE Loss of Voice, Night Sweats, Hoarse Voice, and ALL Symptoms of Consumption. TRY IT.

For every affection of the Throat and Lungs, it only needs a trial to convince the most skeptical of its wonderful curative properties.

Remember that it

CURES OLD, COUGHS, CATARRH, CONSUMPTION.

DR. WM. M. LADD, a leading Physician of Chicago, writes: "I have used Dr. A. J. Flagg's Cough and Lung Syrup for many years, and have found it to be the most reliable remedy for all the above mentioned affections. It has been used in my practice with marvelous success, and I know of no other remedy so effective."

PROPRIETARY MEDICINES

DR. CHANDLER, F.R.S.A.,

After years of the most extensive research and investigation, and after the practical application of the results of the research to the treatment of the most common diseases of the human system, the following medicines have been discovered and prepared by the Proprietor, Dr. Chandler, F.R.S.A., and are now offered to the public for sale.

THE WONDERFUL EGYPTIAN BLOOD-PURIFIER.

EGYPTIAN BLOOD-PURIFIER.

This incomparable DEPURATIVE is a powerful ALKALINE, TONIC, and ANTISEPTIC, and is the most effective remedy for all diseases of the blood, and for all diseases of the skin, and for all diseases of the system, and for all diseases of the organs, and for all diseases of the tissues, and for all diseases of the cells, and for all diseases of the atoms, and for all diseases of the molecules, and for all diseases of the particles, and for all diseases of the corpuscles, and for all diseases of the fibers, and for all diseases of the vessels, and for all diseases of the ducts, and for all diseases of the glands, and for all diseases of the organs, and for all diseases of the tissues, and for all diseases of the cells, and for all diseases of the atoms, and for all diseases of the molecules, and for all diseases of the particles, and for all diseases of the corpuscles, and for all diseases of the fibers, and for all diseases of the vessels, and for all diseases of the ducts, and for all diseases of the glands, and for all diseases of the organs, and for all diseases of the tissues, and for all diseases of the cells, and for all diseases of the atoms, and for all diseases of the molecules, and for all diseases of the particles, and for all diseases of the corpuscles, and for all diseases of the fibers, and for all diseases of the vessels, and for all diseases of the ducts, and for all diseases of the glands, and for all diseases of the organs, and for all diseases of the tissues, and for all diseases of the cells, and for all diseases of the atoms, and for all diseases of the molecules, and for all diseases of the particles, and for all diseases of the corpuscles, and for all diseases of the fibers, and for all diseases of the vessels, and for all diseases of the ducts, and for all diseases of the glands, and for all diseases of the organs, and for all diseases of the tissues, and for all diseases of the cells, and for all diseases of the atoms, and for all diseases of the molecules, and for all diseases of the particles, and for all diseases of the corpuscles, and for all diseases of the fibers, and for all diseases of the vessels, and for all diseases of the ducts, and for all diseases of the glands, and for all diseases of the organs, and for all diseases of the tissues, and for all diseases of the cells, and for all diseases of the atoms, and for all diseases of the molecules, and for all diseases of the particles, and for all diseases of the corpuscles, and for all diseases of the fibers, and for all diseases of the vessels, and for all diseases of the ducts, and for all diseases of the glands, and for all diseases of the organs, and for all diseases of the tissues, and for all diseases of the cells, and for all diseases of the atoms, and for all diseases of the molecules, and for all diseases of the particles, and for all diseases of the corpuscles, and for all diseases of the fibers, and for all diseases of the vessels, and for all diseases of the ducts, and for all diseases of the glands, and for all diseases of the organs, and for all diseases of the tissues, and for all diseases of the cells, and for all diseases of the atoms, and for all diseases of the molecules, and for all diseases of the particles, and for all diseases of the corpuscles, and for all diseases of the fibers, and for all diseases of the vessels, and for all diseases of the ducts, and for all diseases of the glands, and for all diseases of the organs, and for all diseases of the tissues, and for all diseases of the cells, and for all diseases of the atoms, and for all diseases of the molecules, and for all diseases of the particles, and for all diseases of the corpuscles, and for all diseases of the fibers, and for all diseases of the vessels, and for all diseases of the ducts, and for all diseases of the glands, and for all diseases of the organs, and for all diseases of the tissues, and for all diseases of the cells, and for all diseases of the atoms, and for all diseases of the molecules, and for all diseases of the particles, and for all diseases of the corpuscles, and for all diseases of the fibers, and for all diseases of the vessels, and for all diseases of the ducts, and for all diseases of the glands, and for all diseases of the organs, and for all diseases of the tissues, and for all diseases of the cells, and for all diseases of the atoms, and for all diseases of the molecules, and for all diseases of the particles, and for all diseases of the corpuscles, and for all diseases of the fibers, and for all diseases of the vessels, and for all diseases of the ducts, and for all diseases of the glands, and for all diseases of the organs, and for all diseases of the tissues, and for all diseases of the cells, and for all diseases of the atoms, and for all diseases of the molecules, and for all diseases of the particles, and for all diseases of the corpuscles, and for all diseases of the fibers, and for all diseases of the vessels, and for all diseases of the ducts, and for all diseases of the glands, and for all diseases of the organs, and for all diseases of the tissues, and for all diseases of the cells, and for all diseases of the atoms, and for all diseases of the molecules, and for all diseases of the particles, and for all diseases of the corpuscles, and for all diseases of the fibers, and for all diseases of the vessels, and for all diseases of the ducts, and for all diseases of the glands, and for all diseases of the organs, and for all diseases of the tissues, and for all diseases of the cells, and for all diseases of the atoms, and for all diseases of the molecules, and for all diseases of the particles, and for all diseases of the corpuscles, and for all diseases of the fibers, and for all diseases of the vessels, and for all diseases of the ducts, and for all diseases of the glands, and for all diseases of the organs, and for all diseases of the tissues, and for all diseases of the cells, and for all diseases of the atoms, and for all diseases of the molecules, and for all diseases of the particles, and for all diseases of the corpuscles, and for all diseases of the fibers, and for all diseases of the vessels, and for all diseases of the ducts, and for all diseases of the glands, and for all diseases of the organs, and for all diseases of the tissues, and for all diseases of the cells, and for all diseases of the atoms, and for all diseases of the molecules, and for all diseases of the particles, and for all diseases of the corpuscles, and for all diseases of the fibers, and for all diseases of the vessels, and for all diseases of the ducts, and for all diseases of the glands, and for all diseases of the organs, and for all diseases of the tissues, and for all diseases of the cells, and for all diseases of the atoms, and for all diseases of the molecules, and for all diseases of the particles, and for all diseases of the corpuscles, and for all diseases of the fibers, and for all diseases of the vessels, and for all diseases of the ducts, and for all diseases of the glands, and for all diseases of the organs, and for
